

## 12 V Vehicle network conform car alternator regulator IC

**Data brief** 

### **Features**

- System in package smart power alternator regulator and 8-bit microcontroller (nonmonolithic approach)
- Protected high/low side field pre-driver for external MOS
- Field short circuit protection
- Regulated voltage driven by ECU (programmable protocol driven)
- Regulated voltage thermally compensated (without protocol)
- Lamp driver (wake up and warning detection)

- 12 V Systems
- · Self start function
- Load response control (LRC)
- Field monitor (FM) output
- Thermal shutdown
- Package TQFP44EP 10x10

### **Description**

The L9912 is a controlled multifunctional alternator regulator intended to be used for commercial and agricultural vehicles. It supports 12 V System. The control can be achieved through different communication protocol: RCV, PCM, C\_term. It is a System-In-Package solution with smart power alternator regulator IC and 8-bit microcontroller (non-monolithic approach). It includes the control section, fault diagnostic circuit which drives a warning lamp, and the protection against short circuits.

This device regulates in close loop the output of an automotive generator by controlling the field winding current by means of a Pulse-Width Modulation (PWM) of an external high side or low side driver at fixed frequency. Contents L9912
